

Appendix 3 – Party identification over time

Source: Arab Barometer Wave 3, q503; Arab Barometer Wave 4, q503; Arab Barometer Wave 7, Q503A_1.

The plots display the percentage distribution of Lebanon’s principal sectarian parties within the sample (N) across Arab Barometer waves 3, 4, and 7. Collectively, the seven parties and the "no party" category account for an average of 85–90% of the total sample. Waves 5 and 6 (2018–2020) are excluded due to the absence of data on party identity or suitable proxies.

The data suggest a gradual increase in party identification, accompanied by a decline in the “no party” category. While the dataset is insufficient for any causal inferences, party identity persists substantially following protest cycles (wave 7).
